## What type of SIM cards do CradlePoint modems use?

All CradlePoint routers, gateways and modems that are equipped with a SIM card slot use a 2FF (Mini) SIM Card.

The SIM slots in these CradlePoint products are designed to accept 2FF cards which measures 25.0 x 15.0 x 0.76mm.

The newer, smaller "nano" and "micro" SIM cards will not work in the CradlePoint's SIM card slot.

## How do I activate my Cradlepoint Product?

In order to activate the CradlePoint products with integrated modems, you must contact your wireless provider to:

- Provide the IMEI number for activation (found on the product label)
- Acquire a data plan
- Acquire / provide the mini-SIM Card information and have the SIM provisioned

As a service to its customers, TCI Systems stocks SIM cards for AT&T and Verizon. TCI Systems will, upon request, forward the IMEI and SIM serial numbers to a designated carrier rep so that the service can be quickly provisioned.

Visit our eCommerce site - [www.tcisystems.biz](http://www.tcisystems.biz) for all of your CradlePoint requirements.
